ABOUT THE DATASET

- Source -Dataset taken from https://data.gov.in/
- Name of dataset "State/UT-wise Total Missing and traced Persons form 2017-2021".
- It's the integrated dataset consists of 180 rows and 28 columns which we formed from combining 5 different Datasets of missing, traced and untraced person from 2017,2018,2019,2020,2021 in which the information relates to the gender-wise distribution of person.

Basic Statistics	
Raw Counts	
Name	Value
Rows	180
Columns	28
Discrete columns	2
Continuous columns	26
All missing columns	0
Missing observations	0
Complete Rows	180
Total observations	5,040
Memory allocation	35.5 Kb

 Quality parameters like gender-wise Recovery, Untraced and missing person's etc by which we can predict the different cases state wise and year wise.
There are some rows with NA values in the data too.

PURPOSE

- The purpose of choosing the dataset is to analyze is the recovery rate, unrecovery rate of a person and visualize them using different plots. Visualization is used to highlight the useful information.
- To compare the state-wise and year-wise increase and decrease in number of missing, unrecovery and recovered cases.

PLOT USED FOR VISUALIZATION

Bar Plot

Line Plot [18]

REPORT OF THE DATA

library(DataExplorer)

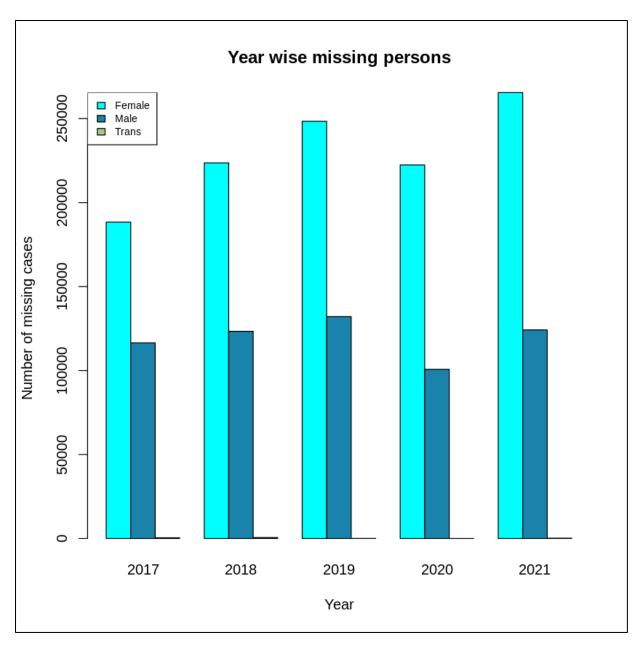

DataExplorer::create_report(df)

(submitted separately)

DATA INTERPRETATION

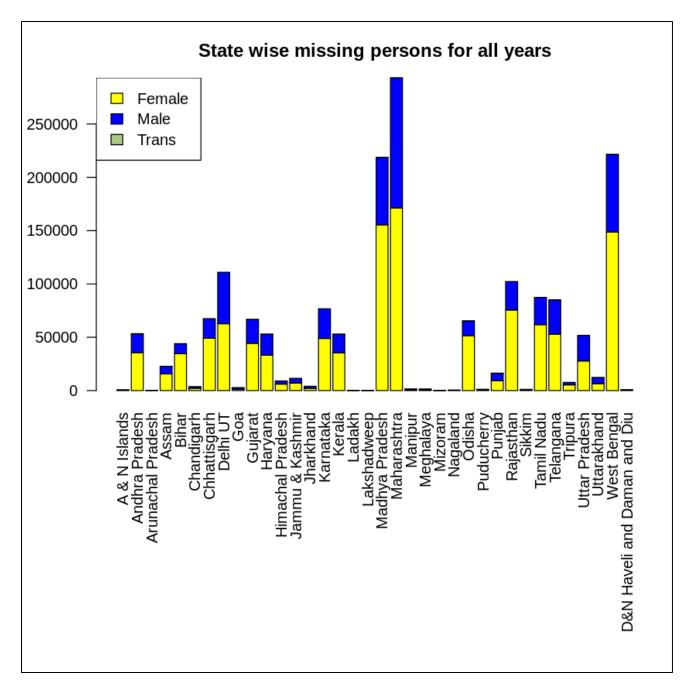

Ques 1: In which year and in which state were total maximum missing cases (male, female and transgender)?

Year	total_missing_female	total_missing_male	total_missing_trans
<int></int>	<int></int>	<int></int>	<int></int>
2017	188382	116467	418
2018	223621	123339	564
2019	248397	132089	40
2020	222395	100748	27
2021	265481	124177	186

(Year-Wise)

Description: The graph shows the number of missing cases from year 2017-2021 using barplot wherein each year consist of three bars (Male,Female,Transgender).

(State-wise)

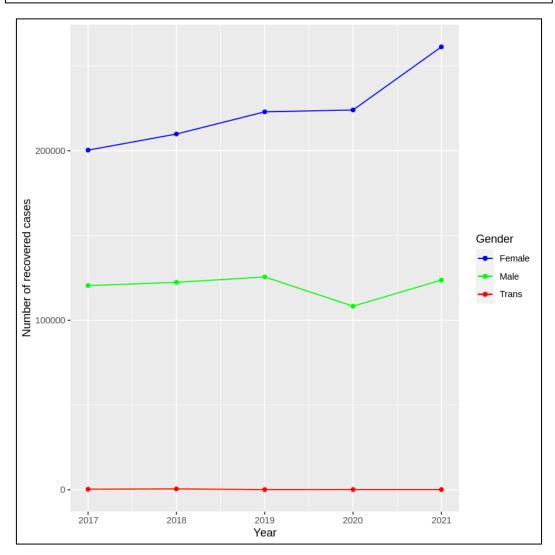

Description: The graph shows the state-wise /UT-wise number of missing cases using barplot wherein each States/UT consist of bars (Male,Female,Transgender).

Interpretation:

- Higher number of missing persons can have following possibilities:
 - Young people wanting to become independent.
 - Being a victim of crime-Human trafficking, Kidnapping etc.
 - Mental Health problems.
 - Old age people who couldn't find their way home due to possible loss of memory.
 - Substance Abuse.
- According to the plotted graph the ratio of missing cases of female are much higher as compared to males and the transgender (which has negligible cases).
- There is a steep decline in the no. of missing cases in the year 2020 and a reason for this could be the lockdown due to Covid-19.

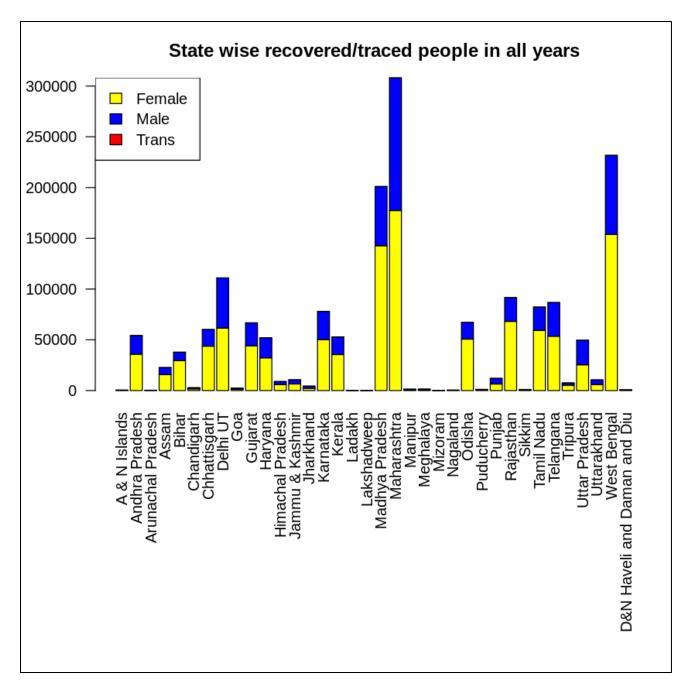

Ques 2: ST/UT wise total recovered cases yearly based?

Year	total_recovered_female	total_recovered_male	total_recovered_trans
<int></int>	<int></int>	<int></int>	<int></int>
2017	200357	120435	346
2018	209852	122384	518
2019	222949	125558	101
2020	224043	108298	142
2021	261278	123716	130

(Year-wise)

Description: The line graph shows the number of recoverd cases from the year 2017-2021 of three bars (Male, Female, Transgender).

(State-wise)

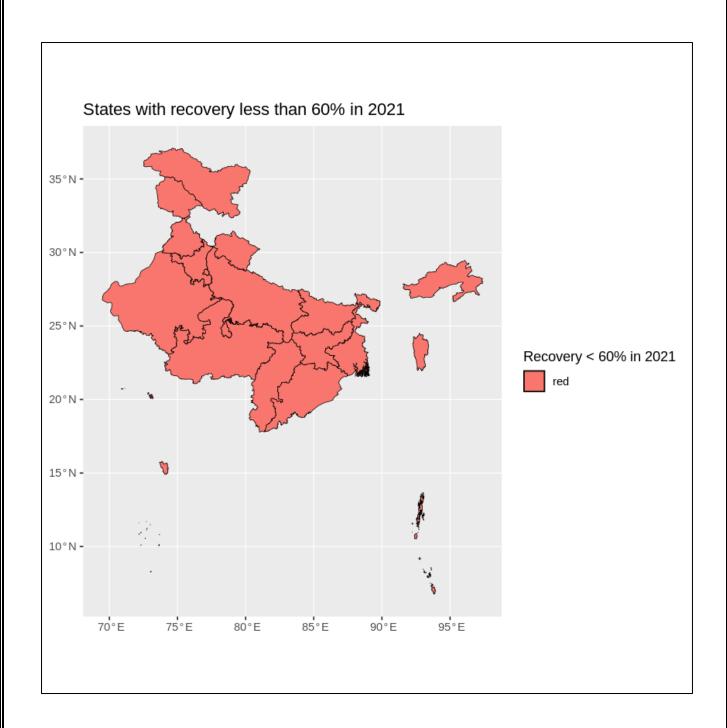

Description: The graph shows the state-wise /UT-wise number of recovered cases using barplot wherein each States/UT consist of bars (Male,Female,Transgender).

Interpretation: Recovery rate of female are much higher than the other two gender over the years but there was certain decline in the recovery rate of the year 2020 due to possible reason of lockdown but amidst these the transgender rate of recovery increase has still not declined in the year 2020.
Another possible reason for a greater number of recovered female cases is due to the larger number of missing cases for female.

Ques 3: Identify the states with recovery rate less than 60%?

Name	Туре	Year	Percentage.RecoveryTotal.Recovered.or.TracedTotal.Missing100Total
<chr></chr>	<chr></chr>	<int></int>	<db1></db1>
Andaman & Nicobar	Union Territory	2021	28.5
Arunachal Pradesh	State	2021	42.1
Bihar	State	2021	43.9
Chandigarh	Union Territory	2021	29.4
Chhattishgarh	State	2021	42.9
Daman and Diu and Dadra and Nagar Haveli	Union Territory	2021	59.7
Delhi	Union Territory	2021	33.5
Goa	State	2021	35.4
Haryana	State	2021	57.8
Jammu and Kashmir	Union Territory	2021	38.9
Jharkhand	State	2021	46.3
Ladakh	Union Territory	2021	22.8
Lakshadweep	Union Territory	2021	0.0
Madhya Pradesh	State	2021	50.0
Mizoram	State	2021	0.0

Odisha	State	2021	49.2
Punjab	State	2021	16.6
Rajasthan	State	2021	55.3
Uttar Pradesh	State	2021	39.5
Uttarakhand	State	2021	50.7
West Bengal	State	2021	44.5

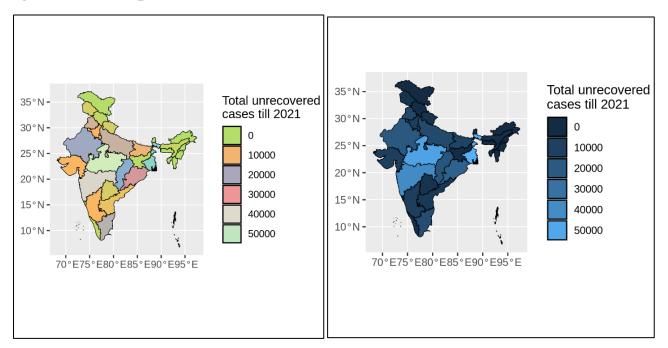

Description: In this Map, the red regions signify the states with recovery rate less than 60% in the year 2021 i.e. [among which the regions with lowest recovery rate are: Punjab, Chandigarh]

Interpretation: On observation the northern region has less recovery rate than the southern region of India. Few reasons could be:

- Faults in Police management system.
- Comparable less literacy rate in few of these northern state.
- More population density, thus more missing cases (as Lakshadweep and Mizoram being exception i.e., they have very few or tends to "1" missing cases).

Ques 4: Interpret the unrecovered cases till 2021?

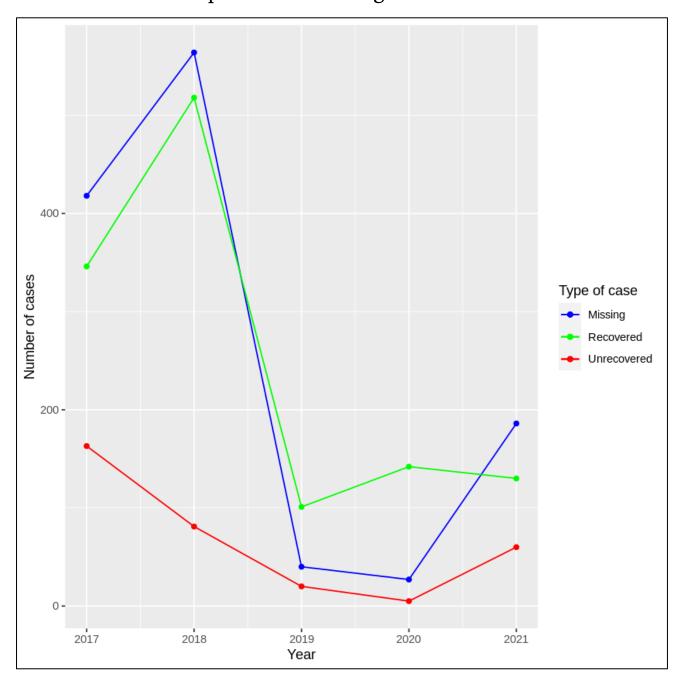

Description: In this Map, we have shown the state-wise total unrecovered cases till 2021.

Interpretation: As we can see from the Map, the states with maximum unrecovered cases are Madhya Pradesh, Maharashtra and West Bengal.

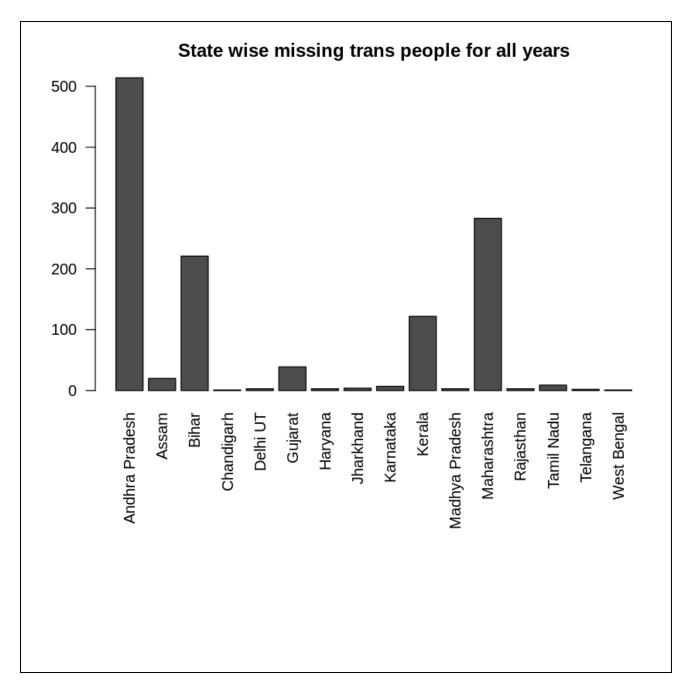

The states with lowest unrecovered cases are Ladakh, Kerela and many of the north-eastern states.

Ques 5: What is the Year-wise and State-wise missing, unrecovered and recovered cases patterns for transgenders?

(Year-wise)

Description: In this Line chart, we have shown the missing, recovered and unrecovered cases for transgender year-wise.

(State-wise)

Description: In this Bar Graph, we have shown the missing cases for transgender state-wise where we have picked the states with no. of cases not equal to zero.

Interpretation:

- There is rise in the no. of missing and recovered cases in 2018.
- In 2019-2020 the no. of recovered cases is much higher than the no. of missing cases which shows the increased responsibility & positivity of the system and society.
- Andhra Pradesh has the maximum missing cases for transgender followed by Maharashtra & Bihar.
- Reasons for the such low no. of total cases for transgender (as compared to male & female) is either because their population percentage is low in society or because identifying themselves is still considered a 'Taboo in India'.
- Bill- <u>Protection of Rights for Transgender person</u> which was passed in 2019 for the empowerment of the Transgender society can be one of the reason for the decline of missing and recovered cases in 2019. As the particular section must be provided with government support.
